MOISTURISING
SOLUTIONS

High-molecular hyaluronic complex
Hydrating and filling.
50 ml / 1.01 fl. oz.

Me

moisturising
in all forms

the element for skincare experts

Skin hydration:

Skin is a metabolically active organ, so it needs **water**, as an essential component to maintain its elasticity and maintain the integrity of the barrier function.

Skin hydration is defined as the water amount contained in the skin. In optimum conditions it ranges from 10% to 20% of water in the stratum corneum.⁽¹⁾ The regulation and maintenance of these hydration levels is dependent upon a variety of mechanisms:

NMF (natural moisturising factor)⁽²⁾:

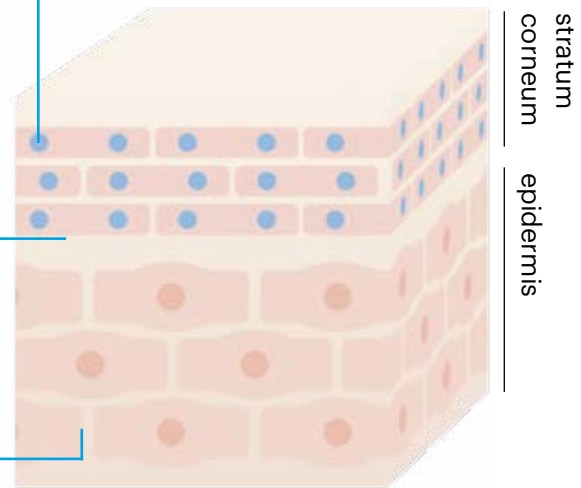

Group of molecules that can uptake water and keep it inside the corneocyte.

Extracellular matrix lipids⁽²⁾:

Intercellular lipids, that determine the barrier function and the permeability of the stratum corneum.

Aquaporins⁽³⁾:

Transmembrane proteins in charge of transporting water and glycerol through the epidermis.

moisturised skin

Schematic representation of a histological section of skin under optimal hydration conditions.

Dehydration:

These mechanisms along with molecules such as hyaluronic acid can be affected by several **intrinsic factors**⁽³⁾ (age, stress, hormonal changes...), and **extrinsic factors**⁽³⁾ (environment, pollution, the use of some medicines...), modifying the skin balance and causing the following signs:

Dull skin,
without brightness

More pronounced wrinkles, increased
flaccidity and loss of elasticity

Irregular texture,
rough touch

Tightness, flaking, itching,
irritation and sensitivity

Moisturising solutions:

mesoestetic has developed a range of solutions beyond moisturising.

Our understanding of the mechanisms involved in the skin moisturising process, has led to the development of solutions able to adapt to the needs of each skin type, preventing dehydration and maintaining optimum functionality and appearance of skin.

Benefits of the range

Moisturising

At all levels, in the key skin levels through specific active ingredients.

Protection

of the essential cell structures through anti-oxidant and anti-pollution active ingredients.

Adaptation

Formulas differentiated to meet the needs of each skin type.

Hyaluronic acid^(4,5,6)

Hyaluronic acid is an oligopolysaccharide synthesised naturally by our body and that is present mainly in the skin (50%).

Thanks to its nature and its wide benefits, it is a key moisturising ingredient:

- It provides a deep moisturising action, as it can retain 1,000 times its weight in water.
- Key to ensure cell functions and their biomechanical properties.
- It prevents and reduces the appearance of expression lines and wrinkles.
- It enhances skin firmness and elasticity.
- Versatile and transversal active ingredient that adapts to the needs of all types of skin.

Moisturising solutions:

A product range formulated with highly effective active ingredients to provide the skin with an optimum moisturising level. Solutions adapted to the needs of each type of skin.

		
ha densimatrix	hydra-vital light	hydra-vital factor k
INTENSIVE MOISTURISING ANTIAGING CONCENTRATE	REFRESHING, LONG-LASTING MOISTURISING	INTENSE MOISTURISING, NOURISHING AND PROTECTION
		
ULTRA-LIGHT CONCENTRATE	FRESH GEL-CREAM	RICH CREAM
All types of skin	Normal to oily skin	Normal to dry skin

facial massage cream

**moisturising
professional solutions**

All skin types

500 mL bottle

hydravital mask

**moisturising
professional solutions**

Dry & dehydrated

500 mL jar

Moisturising solutions:

ha densimatrix

Intensive concentrate that combines hyaluronic acid in several molecular structures for penetration at different levels. Provides anti-aging, plumping and filling action. **All types of skin.**

MULTI-LEVEL MOISTURISING

It contains **ha densimatrix complex**, a combination of HA (cross-linked, high, middle and low) for a long-lasting deep moisturising.

PROTECTIVE ACTION

The action of **anti-hyaluronidase complex** protects from HA degradation and blocks the action caused by external aggressions.

FIRMING AND ANTI-AGING ACTION

antiaging pro complex promotes collagen and elastin synthesis to provide the skin with firmness and elasticity.

Apply 3–4 drops over the previously clean and dry skin, and massage to complete absorption. Apply before the regular treatment cream.

hydra-vital light

Moisturising refreshing gel-cream. It provides short and long-term moisturising while protecting against pollution. **Normal, combination and oily skin.**

IMMEDIATE, LONG-LASTING MOISTURISING

The **combination of cross-linked HA** of high and middle molecular weight provides optimum, long-lasting moisturising.

ANTI-POLLUTION, ANTI-OXIDANT

Urban D-tox prevents adhesion of contaminants to the skin and protects it from oxidative stress.

BARRIER FUNCTION

A **polysaccharide** of plant origin stimulates recovery of the barrier function, thus preventing transepidermal water loss.

Apply it over the clean, dry skin, with gentle circular massages to complete absorption. Apply after ha densimatrix or another concentrate regularly used.

hydra-vital factor K

Rich, nourishing and moisturising cream with protective action. **Normal and dry skin.**

DEEP MOISTURISING

An **ultra-moisturising complex** with a composition very similar to the natural moisturising factor (**amino acids, urea, allantoin and lactic acid**) that helps restore and reinforce the hydrolipidic film, maintaining moisturising levels throughout the day.

PROTECTIVE ANTI-OXIDANT ACTION

The presence of **alpha tocopherol (vitamin E)⁽⁷⁾** exerts an anti-oxidant action that protects the skin from the formation of free radicals, which are responsible for accelerating skin aging.

Apply it over the clean, dry skin, with gentle circular massages to complete absorption. Apply after ha densimatrix or another concentrate regularly used.

hydravital mask

Intensive moisturising mask for **dry and dehydrated skin.**

INTENSIVE MOISTURISING

The combination of **hyaluronic acid** with **Viola tricolor extract** provides immediate high-quality moisturising and a more efficient, homogeneous moisturising.

RELIPIDANT, NOURISHING

Thanks to **argan oil**, rich in omegas 3 and 6, the skin recovers lipids essential for its comfort, balance and adequate defence.

SOOTHING

Panthenol (pro-vitamin B5)⁽⁸⁾ provides a regenerating, soothing and anti-reddening action.

Apply a large layer of product over the previously clean, dry skin and leave on for 10-15'. Remove the remaining product with a sponge or wet wipe.

Dermatologically tested

Non-comedogenic

MOISTURISING SOLUTIONS

Range of moisturising products with highly effective active ingredients that help prevent dehydration at all levels.

Formulas with textures and active ingredients that adapt to the needs of each type of skin.

An additional protective action, through anti-oxidant and anti-pollution active ingredients protects the cell structures from oxidative damage caused by external aggressions.

Discover the most appropriate moisturising action for your type of skin and feel moisturising in all its forms.
