 photoprotection solutions

Photoprotection

Solar radiation can cause undesirable effects on the skin in the short and long term. Although our skin has defence systems, it does not have the capacity to filter out all the effects of occasional or accumulated overexposure.

The purpose of **photoprotection** is to minimise and prevent the damage that occurs on our skin as a result of its exposure to solar radiation.

mesoprotech®

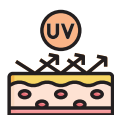

mesoestetic®, in its firm commitment to innovation, presents the evolution of **mesoprotech®**. A new generation of sun protectors designed to provide a broad-spectrum protection against the various types of visible and invisible radiation that reach the skin.

Efficacy and innovation

Broad-spectrum protection

Combination of physical, chemical and biological filters that provide protection against **UVB, UVA, visible light (HEV) and infrared (IR)** radiation.

Reinforcement of biological photoprotection

Protecting and repairing action for damage caused by solar radiation.
Repair of tissues and damage produced in cell DNA.

UV-activated
technology

New photoactivation technology

Patented endogenous and exogenous: **photon UV activated technology**.

Cross-cutting antiaging action

Through collagen pro-47, a specific antiaging active ingredient that protects and enhances collagen synthesis.

Sustainability

At mesoestetic® we are committed to the planet. We are constantly working to improve the sustainability profile of our products, with the aim of reducing the impact on the environment.

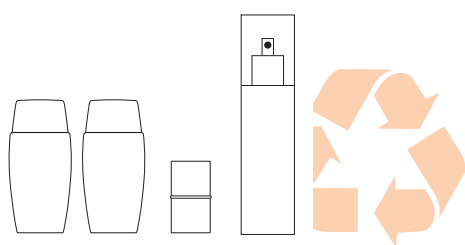

mesoestetic®

to the planet

More sustainable, easily recyclable packages

Primary packages with recycled plastics **50-95% PCR** (post-consumer recycled) or monomaterial packages.

Secondary packs and packages with **FSC certificate**, guarantee that no forest mass is reduced by producing them.

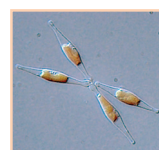

Formulas that respect marine organisms*

Formulas that ensure the adequate development of corals and other marine organisms.

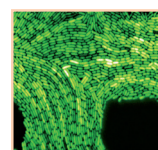

Eco-toxicity test in crustaceans, microalgae and marine bacteria.

Crustaceans

Microalgae

Symbiotic bacteria

*Microalgae (Phaeodactylum tricornutum) ISO 10253, Crustaceae (Artemia franciscana) ISO 14669, Marine bacteria (Vibrio fischeri) ISO 11348-3

A sun protection for each skin type

Textures adapted to each skin type

Water-resistant

Specific active ingredients

Dermatologically tested

photoprotection solutions

The **mesoprotech**[®] range has an innovative technology that strengthens biological protection at two levels: It increases the protective efficacy, stimulating the skin's natural defence system, and repairs the cell damage caused by solar overexposure.

PHOTON

UV activated technology

PHOTON It is the state-of-the-art photosensitive technology that activates protection and repair systems to defend the skin against solar radiation.

This photoactivation technology acts endogenously and exogenously from two complexes: **Photon DNA complex** and **photon bioskein**.

photon DNA repair complex

Prolonged sun exposure can cause damage to cell DNA, leading to genetic alterations responsible for actinic damage and skin photoaging.

Our body has a natural defence system that can repair this damage. However, its repairing capacity is limited, so it can be insufficient to cope with solar overexposure.

Photon DNA repair complex is a liposomal complex that contains **photolyase** and **mycosporines (MAAs)**.

What benefits does it offer?

• Repairs the DNA damaged by UV radiation

Photolyase is an enzyme that is activated with visible light and which immediately repairs the damaged DNA¹.

• Reinforces photoprotection

Mycosporines act as a natural filter, absorbing UV radiation. They also contribute to the neutralisation of free radicals with a powerful antioxidant action².

• It increases tissue regeneration

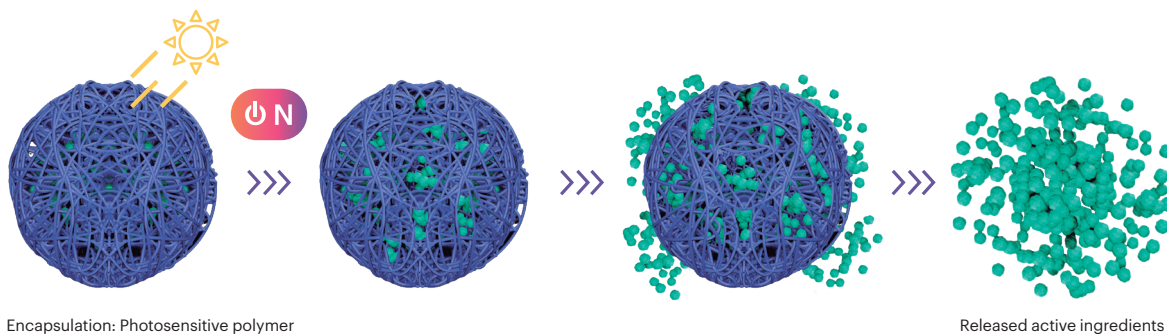

It accelerates the reepithelisation and healing of tissues³.

photon BIOSKEIN^{PENTENT}

As a result of innovation and our technological capacity, mesoestetic® has developed photon bioskein, a particle of its own synthesis with photosensitive encapsulation.

When solar radiation strikes, the progressive release of the active ingredients into target cells is activated, offering a **continuous repairing and anti-aging action**, which continues hours after the sun exposure.

What benefits does it offer?

- **Reinforces photoprotection**

It acts synergistically with the solar filter system, strengthening the photoprotection action.

- **It increases skin firmness and elasticity**

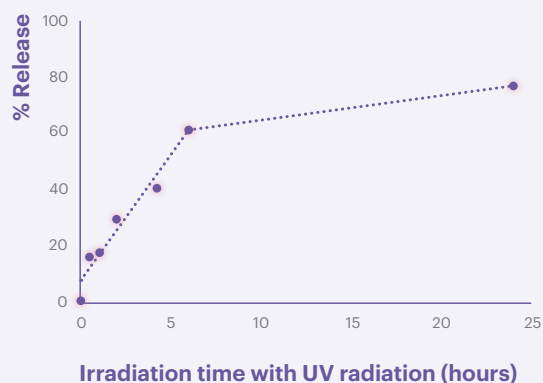

It increases skin regeneration and the production of extracellular matrix proteins such as collagen and fibrillin⁴.

The efficacy, release mechanism and targeted action of photon bioskein have been demonstrated.

Long-lasting release

In vitro study: Release mechanism⁵

Continuous irradiation with UV radiation causes the continued release of the active ingredient from inside the encapsulation.

Targeted release

Ex-vivo study: Biodistribution in skin explant⁶

Directs the action of photon bioskein by exercising sustained and lasting release in target cells.

IR HEV UVB UVA **photoprotection solutions**

mesoprotech®: products

50 mL bottle

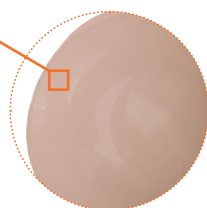

mesoprotech® melan 130 pigment control

Skin with hyperpigmentation / all skin types

SPF 50+. Very high specific photoprotection. **UVB: 131/UVA: 67.** Combination of physical, chemical and biological filters.

SPECIFIC ACTIVE INGREDIENT

Azeloglycine regulates hyperpigmentation by inhibiting tyrosinase. **Iron oxide** provides protection against visible light, which is involved in the appearance of spots.

Coloured emulsion. Light texture with pigments to even out tone and reduce imperfections. Universal colour, adapts to all skin types.

4.5 g stick

mesoprotech® sun stick 100

Eye contour, lip, scar and other sensitive areas

SPF 50+. Very high specific photoprotection. **UVB: 122/UVA: 90.** Combination of physical, chemical and biological filters.

SPECIFIC ACTIVE INGREDIENT

Rosehip seed oil, with regenerative properties, promotes epidermal repair processes.

Stick. Handy format which allows application anytime, anywhere. Easy to spread, leaves no greasy residue.

Key data on photoprotection

Apply sufficient amount

(2 mg/cm², equivalent to one teaspoon of coffee all over the face) 30 minutes before exposure.

Reapply every 2 hours

especially after drying off with a towel, after swimming or when sweating.

Avoid during **the middle of the day:** from 11am to 4pm.

Wear sunglasses and a hat in the event of **intense and prolonged exposure.**

50 mL bottle

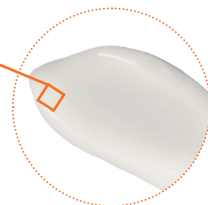

mesoprotech® water veil

Combination oily-prone skin

SPF 50+. Very high photoprotection. Combination of physical, chemical and biological filters.

SPECIFIC ACTIVE INGREDIENT

With **hyaluronic acid**, provides a moisturising action at an epidermal level and enhances tissue elasticity and firmness. It helps reduce the signs of aging.

Gel-cream. Ultralight, fast-absorbing gel cream. Non-comedogenic.

50 mL bottle

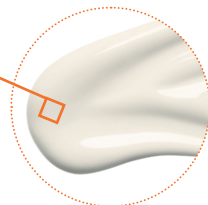

mesoprotech® hydra cream

Dry and dehydrated skin

SPF 50+. Very high photoprotection. Combination of physical, chemical and biological filters.

SPECIFIC ACTIVE INGREDIENT

Ceramides are essential lipids that restore balance to the water-lipid mantle, protecting the skin, avoiding dehydration and skin aging.

Creamy texture. Cream that provides comfort and hydration for greater skin elasticity and softness.

Safety and tolerance

 **Dermatologically tested**

 **Water-resistant**

 **No Comedogenic**

 **Ophthalmologically tested**

How to apply

 **Shake before using it**

 **Apply at a 10cm distance**

photoprotection solutions

50 mL bottle

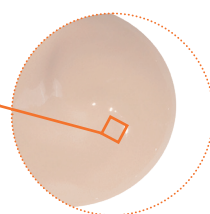

mesoprotech[®] mineral fluid

Sensitive and sensitised skin. Post-procedure

SPF 50. High photoprotection. Combination of physical and biological filters.

SPECIFIC ACTIVE INGREDIENT

Prebiotic, rebalances the skin microbiota and reduces signs associated with skin sensitivity.

Coloured fluid. Fluid with pigment to minimise the white residue of physical filters.

200 mL
spray bottle

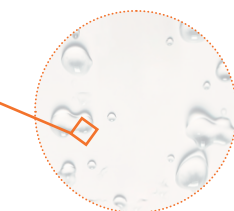

mesoprotech[®] body sun spray

Body. All skin types.

SPF 50+. Very high photoprotection. Combination of physical, chemical and biological filters.

SPECIFIC ACTIVE INGREDIENT

Vitamin E provides an antioxidant and protective action.

Light texture. Easy to spread, with an invisible finish. It provides elasticity and prevents dehydration.

60 mL spray
bottle

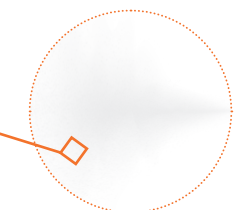

mesoprotech[®] antiaging facial sun mist

All skin types

SPF 50+. Very high photoprotection. Combination of chemical and biological filters.

SPECIFIC ACTIVE INGREDIENT

Vitamin E provides an antioxidant and protective action.

Fresh and ultra-light mist. It is uniformly sprayed and avoids having to spread it. Touch-up application. Allows applying over make-up.

photoprotection professional solutions

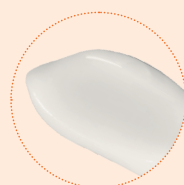

500 mL bottle

mesoprotech® professional veil

All skin types

SPF 50+. Very high photoprotection. Combination of physical, chemical and biological filters.

Light gel-cream. High-efficiency sun protection is an essential finishing point after any facial clinic treatment. Its ultra-light texture with fast absorption and easy spreadability suits all skin types.

Key details for a correct recommendation

Adjust the **protection rate to the skin phototype**. The clearer the skin type, the higher the sun protection factor should be.

Suit **mesoprotech® product to the skin type and its needs**: An inadequate photoprotector can lead to an insufficient application due to a lack of adherence.

The face is more sensitive to solar radiation since the skin is thinner, more delicate and is also continuously exposed to it.

After medical-cosmetic treatments that might sensitise the skin, daily application of a photoprotector is recommended.

Adapt the protection **to the weather conditions**, taking extreme precautions at sea or the mountains, do not forget to apply on a windy or cloudy day.

There are multiple **photosensitising medicines**. If you are under pharmacological treatment, check the risk of solar sensitisation.

IR HEV UVB UVA photoprotection solutions

Complete state-of-the-art photoprotection against **UVA-UVB-IR-HEV** radiation.

With an **innovative photosensitive technology**, which activates protection and repair systems to defend the skin against visible and invisible radiation.

Complete formulas that include **specific active ingredients** to provide differentiated actions in each of their formulas.

Innovative textures to adapt to the needs and demands of each skin type. Dermatologically **tested formulas**.
